

On behalf of the Congressional Academic Medicine Caucus,
the Association of American Medical Colleges (AAMC) presents:

Care in the Face of the Opioid Epidemic: How Medical Schools and Teaching Hospitals are Reaching Underserved Communities

Tuesday, October 17, 2017, 12:00 p.m.
House Capitol Visitor Center: HVC-201

Speaker Biographies

Clay Marsh, MD, vice president and executive dean for health sciences, West Virginia University Health Sciences Center

Clay Marsh, MD, leads the academic health sciences center of West Virginia University – including five schools – dentistry, medicine, nursing, pharmacy and public health – and numerous allied health programs and clinical operations around the state.

A national leader in personalized medicine and in pulmonary and critical care medicine, Marsh has concentrated his efforts in determining how to help individuals stay healthy and how to create ecosystems to make this easy.

Marsh is a two-time graduate of West Virginia University, earning an undergraduate degree in biology in 1981 and a medical degree in 1985.

From 1985 to 2015 he was at The Ohio State University. He served a residency in internal medicine; a research fellowship in pulmonary and critical care, a chief residency in internal medicine; a fellowship in pulmonary and critical care medicine; and an extension research fellowship in pulmonary and critical care. As a faculty member, he held a wide range of teaching, clinical, research, and administrative roles at Ohio State's Wexner Medical Center, including as vice dean for research and, most recently, vice dean for innovation in the College of Medicine. In this position, he established OSU's IDEA Studio in Healthcare and Design.

Marsh's research has focused on defining the underlying mechanisms that determine health and disease. His research interests include the molecular regulation of longevity and epigenetic controls of aging. He holds more than 20 patents or patent disclosures. He has mentored more than 50 MD, MD/PhD and PhD doctoral students, post-doctoral researchers and junior faculty, and won a number of Ohio State teaching awards. He has been responsible for more than \$20 million in National Institutes of Health funding as principal investigator, co-PI, co-investigator, and mentor, and has published more than 140 papers in peer-reviewed journals.

He serves on national scientific advisory committees for organizations such as the National Institutes of Health, the American Thoracic Society, the Sarnoff Cardiovascular Research Foundation, GlaxoSmithKline and Caris Life Sciences. He is a Fellow in the American College of Physicians and an elected member of the American Society for Clinical Investigation.

Michael Lyons, MD, associate professor of emergency medicine; director, Early Intervention Program, University of Cincinnati College of Medicine

Michael S. Lyons MD, MPH is an Associate Professor of Emergency Medicine and practicing emergency physician at University of Cincinnati. He also leads the UC Early Intervention Program (EIP), which seeks to improve early diagnosis and linkage to care for various health conditions in the emergency department, other healthcare settings, and the community.

Dr. Lyons completed his undergraduate studies at Northwestern University and attended medical school at Duke University. He then served as a resident and chief resident at the University of Cincinnati, which was the first emergency

medicine residency program ever created. Dr. Lyons has also completed a Master of Public Health degree at Emory University.

Dr. Lyons frequently partners with local and state health departments on issues that span the public health and healthcare sectors. His corresponding program of research focuses on early detection and intervention for threats to public health, and implementation of prevention interventions in acute care settings. He has been funded as a primary investigator by NIH and AHRQ, and has served as a co-investigator on several trials funded by the NIH and CDC. He is also a co-investigator for the Ohio Valley Node of the NIDA Clinical Trials Network.

Jeanette M. Tetrault, MD, FACP, FASAM, associate professor of medicine; program director, Addiction Medicine Fellowship, Yale University School of Medicine

Dr. Tetrault is an Associate Professor of Medicine and a clinician educator in the Section of General Internal Medicine at Yale University School of Medicine. She is also the Program Director for the Yale University School of Medicine Addiction Medicine Fellowship. She is a primary care physician and addiction medicine specialist at the APT Foundation. There she provides primary care services and chronic disease management, including HIV and Hepatitis C treatment; assessment and treatment of alcohol, opioid and other substance use disorders; and ambulatory detoxifications. She is co-director of the Addiction Recovery Clinic at Yale New Haven Hospital St. Raphael's Campus Adult Primary Care Center, which is an addiction treatment clinic embedded within primary care practice. For the past 10 years, Dr. Tetrault has served as the Internal Medicine Team Leader for the Substance Abuse and Mental Health Services Administration-funded Screening, Brief Intervention and Referral to Treatment (SBIRT) initiative at Yale University School of Medicine. She is on the Board of Directors of the Addiction Medicine Foundation and the Addiction Medicine Fellowship Director's Association. She is a diplomate of the American Board of Addiction Medicine, co-chair of the Society of General Internal Medicine's (SGIM) Alcohol, Tobacco and Other Drug Use Interest Group, and past-president for the New England Region of SGIM.

In June 2017, Dr. Tetrault was selected as a Macy Foundation Scholar to develop an interprofessional longitudinal addiction curriculum at Yale Schools of Medicine and Nursing where learners will apply the chronic disease model to addiction; enhance clinical skill development in identifying and treating substance use; and characterize the challenges patients and their families may face while navigating the healthcare system.

Her academic interest focuses on improving care of patients with substance use and the chronic diseases associated with addiction. This encompasses the spectrum ranging from identification of patients in primary care settings with at-risk alcohol and other drug use and providing brief treatment to caring for patients with substance use disorders and comorbid HIV and/or HCV. Dr. Tetrault has published widely in the field of Addiction Medicine including epidemiologic investigation, investigation of unique delivery care models, examination of safety of addiction pharmacotherapies, and addiction medicine curriculum design, evaluation, and dissemination.

Karen Fisher, JD, chief public policy officer, Association of American Medical Colleges

Karen Fisher, JD, leads the AAMC's public policy initiatives on medical education, health care delivery and medical research, providing strategic guidance to advance the association's legislative and regulatory priorities and developing policy proposals that support the work of academic medicine.

One of the nation's leading experts on Medicare, Ms. Fisher has more than 20 years of experience in legislative and regulatory health care policy. Most recently, she served as senior health counsel for the Senate Finance Committee where she played a key role in drafting the Medicare Access and CHIP Reauthorization Act of 2015 and the new Medicare physician payment system. She also served as lead adviser on other Medicare concerns and health care policies. Before moving to the Senate, Ms. Fisher spent almost a decade as senior director in health care affairs at the AAMC after serving as senior health policy analyst and general counsel for the Prospective Payment Assessment Commission—the precursor to the Medicare Payment Advisory Commission (MedPAC).

Ms. Fisher earned both her pharmacy and law degrees from the University of Pittsburgh.
