We educate and train tomorrow’s doctors.

We pioneer cures and bring them to patients.

We provide care not available elsewhere.

Nearly 55% of all extramural research funded by the National Institutes of Health is performed by researchers at medical schools and teaching hospitals.

Advances and new treatments developed at medical schools and teaching hospitals include:
- Coronary angioplasty and drug-coated stents
- Bone marrow and organ transplants
- Insulin infusion pump for diabetics
- Chemotherapy and CAR T-cell therapy for cancer
- New treatments for cystic fibrosis
- Minimally invasive surgery
- Better ways to manage chronic diseases
