

# Graduate Medical Education: Training Tomorrow's Physician Workforce

## The Physician Shortage

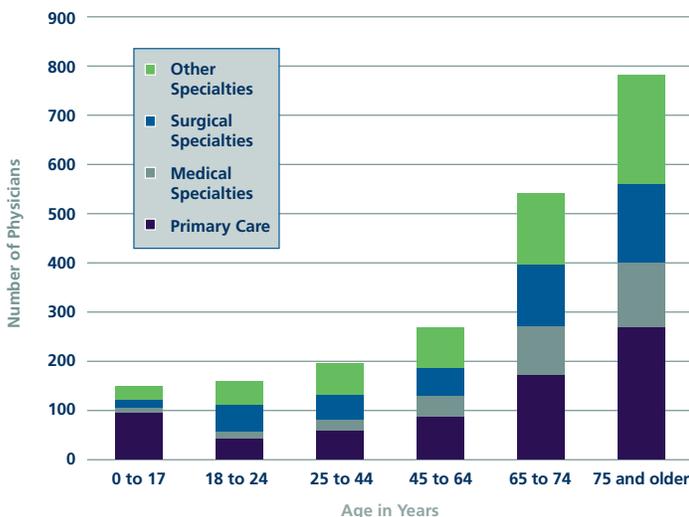

### The United States Is Facing a Shortage of Between 46,900 and 121,900 by 2032<sup>4</sup>

- Between 21,100 and 55,200 primary care physicians.
- Between 24,800 and 65,800 surgeons and other specialists.

### What Is Driving the Physician Shortage

- By 2032, the number of Americans over age 65 will grow by 48%.<sup>5</sup> Seniors also have a much higher per capita consumption of health care.
- Medical advances have increased the number of people living with multiple chronic illnesses.
- More than two out of every five doctors are over age 65 and likely to retire in the next decade. Further, the past decade has seen a trend toward physicians of all ages working fewer hours.
- Though demand is increasing, supply is not increasing at the same pace because of a cap Congress imposed on Medicare GME support.

### Physician Utilization per 100,000 People, by Age

Source: HHS/HRSA. *The Physician Workforce: Projections and Research into Current Issues Affecting Supply and Demand*, December 2008.

### Federal GME Policy Is NOT a Significant Driver of Physician Specialty Choice — Payment Rate IS

“The single most important way Medicare can influence the mix of physicians ... is to reform how it pays for services. [Medical school graduates] reasonably look at future earnings prospects when choosing a specialty ... payment rates can influence that choice.”

-MedPAC June 2010 Report to Congress

### Lifting the Cap on Medicare GME Funding Will Help Alleviate the Doctor Shortage

Currently, two bills in Congress would help address the doctor shortage by increasing residency slots by 15,000 over five years. This increase would account for one-quarter of the doctors necessary to meet the country's workforce needs.

- Resident Physician Shortage Reduction Act of 2019 (H.R. 1763, S. 348)

4. Association of American Medical Colleges. 2019 Update: The Complexities of Physician Supply and Demand: Projections from 2017 to 2032. Washington, DC: AAMC; 2019. Note: The range of the projected shortfall for total physicians is smaller than the sum of the ranges of the projected shortfalls for the specialty categories. The demand scenarios modeled project future demand for physician services, but scenarios can differ in whether future demand will be provided by primary care or nonprimary care physicians. Likewise, the shortfall range for total nonprimary care is smaller than the sum of the shortfall ranges for the specialty categories.
